

CMS Backend System

Overview

Content Management System (CMS) backend built with Laravel, featuring user authentication, role-based access control, and RESTful APIs.

Frontend Dashboard (Blade Laravel)

This CMS includes a Laravel Blade-based frontend interface that interacts with the backend via APIs.

Access it locally at: <http://127.0.0.1:8000>

Features

- - User Authentication using Laravel Sanctum
- - Role-based Access Control (RBAC)
- - Product Management System
- - Order Management
- - RESTful API Endpoints
- - Docker Support

Prerequisites

- - PHP >= 8.1
- - Composer
- - MySQL/PostgreSQL
- - Docker (optional)

Project Structure

- The project follows a typical Laravel directory structure:
 - app/: Contains the core application logic (Controllers, UiControllers, Models, Services).
 - database/: Contains migrations, seeders, and factories.
 - routes/: Contains route files (api.php, web.php, Auth.php).
 - tests/: Contains both Unit and Feature tests.
 - public/: Entry point for web traffic.
 - Dockerfile & docker-compose.yml: Docker configuration.
 - .env/.env.example/.env.docker: Environment configuration files.
 - resources/views: Blade templates for the frontend dashboard.

Installation

1. Clone the repository

```
git clone https://github.com/AhmedShabaan10/cms-backend.git  
cd cms-backend
```

2. Install dependencies

```
composer install
```

3. Environment setup

```
cp .env.example .env  
php artisan key:generate
```

4. Database setup

```
php artisan migrate  
php artisan db:seed
```

API Authentication

This project uses Laravel Sanctum for API authentication. To authenticate:

1. Register a new user
2. Login to receive your authentication token
3. Include the token in your request headers:

```
Authorization: Bearer <your-token>
```

Running Tests

Note:

Before running tests, make sure you have a dedicated testing database configured. Create a `.env.testing` file and set up the database connection

Run all tests:

```
php artisan test
```

Run specific test:

```
php artisan test --filter=OrderDetailsServiceTest
```

Default Admin Credentials

Seeded by AdminSeeder.php

Role	Email	Password
Super Admin	admin@admin.com	123456
Admin (RBAC)	user@admin.com	123456

- Super Admin has full unrestricted access.
- Admin is assigned the admin role and has controlled permissions.

Docker Setup (Optional)

You can optionally run the CMS backend using Docker and Docker Compose.

This is not required if you prefer to run the project manually on your local machine.

Note:

These steps work on both Windows (using WSL or Docker Desktop) and Linux.

Make sure Docker and Docker Compose are properly installed and running.

1. Build and Run the Containers

```
docker-compose up -d --build
```

Access the container and run the setup as usual:

```
docker exec -it app bash  
composer install  
cp .env.docker .env  
php artisan key:generate  
php artisan migrate  
php artisan db:seed
```

Stop the Containers

```
docker-compose down
```
